

Task 8 — Retention, Cohorts & Churn Prediction

Data Analyst · Sprint B - Growth & Experimentation · Evaluation Key

DATA ANALYST

PlaceMux · Phase 3 · Evaluation Key

TASK 8 / 25

Deep Specialist · Expert

Sprint B - Growth & Experimentation · Mastery 72%

Expected output

- “Cohort retention curves for both sides of the marketplace” — done, working and demoable.
- “A defensible churn definition and its measured rate” — done, working and demoable.
- “Identification of the behaviours that predict retention” — done, working and demoable.
- Good looks like: You know whether PlaceMux actually retains users, and what a retained user does differently in week one.

Evaluation criteria (key points)

- Present cohort curves and the retention-predicting behaviour, with the evidence.
- What does a retained user do in week one that a churned user does not?
- Is that behaviour a cause, or just a symptom of already caring?
- Does the curve flatten, or does everyone eventually leave?
- Must NOT be true: Retention curve that never flattens, treated as fine.
- Must NOT be true: Aha moment asserted without a test.

Scoring parameters (marks distribution · out of 100)

#	Scoring parameter	Marks
1	Core deliverable — “Cohort retention curves for both sides of the marketplace” built, working and demoable	18
2	Core deliverable — “A defensible churn definition and its measured rate” built, working and demoable	16
3	Core deliverable — “Identification of the behaviours that predict retention” built, working and demoable	16
4	Real-data quality & correctness (works on real production-shaped data at scale, not a toy or happy-path)	20
5	Live verification & evidence (demoed live end-to-end; real numbers shown, not claimed)	15
6	Dependency, failure & edge-case handling (failure paths proven; hand-offs honoured)	15
	TOTAL	100

How to grade

- 70+ / 100 with a live demo on real data = PASS.
- Phase 3 is graded strictly: a claim without evidence scores zero on that parameter.
- A perfect happy path with no failure handling caps at 85 — robustness is not optional at this level.
